

Up-lighting involves casting light upward to highlight the texture, size, color and features at night.

Shadowing and backlighting incorporate background light to silhouette landscape and structural features.

Landscape lighting is typically considered to highlight trees, shrubs, ground cover, and bedded items. In addition, it is widely used to accentuate entrances, patios, statuary, fountains, ponds, waterfalls, and other features. As a navigation feature for drives, walks and steps, it fundamentally improves safety.

Applications include:

- Accent lighting
- Path lighting
- Garden lighting
- Landscape lighting
- Pools, jacuzzis, patios, porches
- Gateways, driveways, walkways
- Flower beds, terraces, ponds
- Waterfalls, statues, structures
- Architectural features, gazebos
- Security and safety lighting

Turning Dreams into Realities

Landscape Lighting

Landscape and Outdoor Lighting extends living space and allows the enjoyment of the architectural features and landscaping in the evening.

Many working homeowners can only enjoy their landscaping investment during the weekends while they are around the house. They lose the every day enjoyment of the outdoors around their home. lighting allows the homeowner to enjoy their home by transforming darkened areas, decks, gardens, pools and landscaping into a welcoming outdoor evening environment.

Safety and convenience for your family and guests is achieved through landscape lighting, in addition to, added security in a manner that is aesthetically pleasing and appropriate to the site.

Expertise is required to ensure that the lighting provides the final touch to complement and enhance a carefully designed landscape plan. Lighting is an outdoor amenity usually added after the landscaping has been installed.

The ideal lighting system is easy to maintain and operate and increases the beauty and value of the home.

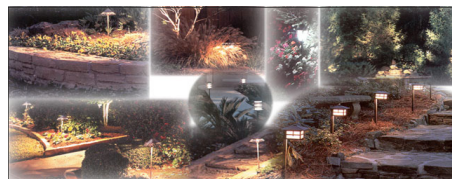

Outdoor lighting complements and enhances the home and landscape with high quality long lasting equipment for continued enjoyment.

A full complement of top quality products and services are available from Horticare Landscaping to design, create and install systems that enhance the beauty and enjoyment of your evenings.

To achieve the aesthetic beauty of a harmonious lighting effect, it takes much more than simply spot lights in trees. To bring out the distinctive character and architecture of a home, nothing succeeds the way we do.

OUTDOOR LIGHTING TECHNIQUES

Various lighting techniques are used to persuade trees, bushes, gardens, stones, brickwork and structures to spring to life at night, while maintaining a safe outdoor environment for your family and visitors.

These enrichments are achieved through various lighting techniques such as up-lighting, down-lighting, moon-lighting cross-lighting, grazing, shadowing, path-lighting and back-lighting.

Each technique requires attention to placement, brightness, beam width, angle, direction, and spacing to achieve the desired effects. The variety of fixtures and products we offer provide a versatile system for stand-alone or combination lighting situations.

Architectural lighting and the grazing techniques are used to accentuate texture variations and architectural features common to stone and brick work. Architectural lighting also applies to statues, fountains or gateways.

Path lighting in combination with adjacent landscape lighting provides safety and security by illuminating driveways and walkways.

Moon lighting and down-lighting are accomplished by mounted fixtures in tree branches to create a moonlight effect. This method encourages cast shadows to produce a variety of patterns on the lawn and other ground surfaces.
